Logo STUDENT REPORT DETAILS Name 3choo A BRAMHAYYA ACHARI BR25 2000 Roll Number 3BR23CD001 **EXPERIMENT** Title **EQUILIBRIUM** Description You are given an array A of N integers. An equilibrium position is a position where the sum of all integers on its left is equal to the sum 8R23CD01 of all integers on its right in the array A. Print the index of the equilibrium position. 1013BR2? Note: For any given array there is only a single equilibrium position, if no equilibrium position is found then print "NOT FOUND" without quotes. The array is 1 indexed. chool 38 **Input Format:** The input consists of two lines: 31 3BR23 The first line contains an integer denoting N. The second line contains N space-separated integers denoting the elements of the array A. SR23CDOS Input will be read from the STDIN by the candidate **Output Format:** Print the index of the equilibrium position. If no index is found, print "NOT FOUND" Sample Input 5 24733 **Sample Output** 3 Source Code: 3BR2

```
def find_equilibrium_position(N, A):
       total_sum = sum(A)
       left_sum = 0
       for i in range(N):
           right_sum = total_sum - left_sum - A[i]
           if left_sum == right_sum:
               return i + 1
           left_sum += A[i]
       return "NOT FOUND"
   # Input reading
   N = int(input())
   A = list(map(int, input().split()))
   result = find_equilibrium_position(N, A)
   print(result)
